

seedSTART

BioEnhanced SeedDressing

seedSTART is a biologically enhanced liquid seed dressing with trace elements, growth stimulants & promotents, humic carbon, fulvic and biology

Typical Analysis (w/v)	Microbial System
Nitrogen	3.20%
Phosphorous	1%
Potassium	5.60%
Humates	8%
Sulphur	1%
Calcium	0.80%
Iron	0.69%
Manganese	0.08%
Zinc	2.90%
Silica	0.16%
Trace Elements	0.15%
Fulvates	0.20%
Omeegas	3.20%
Sugars	4.80%

Typical Contents

seedSTART natural seed treatment;

- make less available soil nutrients available to the plants
- increase available soil phosphate
- promote nitrogen fixation
- root development and quick emergence
- stimulated cell division and increased stress tolerances

In addition seed dressings can increase the vigour of treated plants helping them resist damage by pathogenic fungi.

SEEDSTART SETS UP CROPS FOR HIGH YIELDS

Typical Application

10 ltrs seedSTART per tonne seed.

Apply directly to seeds, auger injection. Allow to dry - use immediately

“High yielding crops use SeedStart biologically enhanced seed dressing + VAM to get the best start and high yields”

**VAM
PLUS**

High Analysis VA Mycorrhizal fungi;

- Improve uptake of water
- Improve utilisation of fertiliser
- Improve plant growth

Add VAM Plus to SeedStart liquid inoculant for increased seed VAM inoculation.

A dry powder containing *Glomus intraradices* at 150 spores/gram.

Add VAM Plus and mixed at 200g/ltr of Seed Start prior to seed application for best results

**Southern Soils
