

superSEVEN

BioEnhanced PhosphateFertiliser

superSEVEN is a biologically enhanced phosphate fertiliser developed to replace superphosphate

SuperSEVEN is a superior pasture fertiliser which contains specifically developed ratios of water soluble and sustained release phosphates, sulphur and calcium.

TYPICAL ANALYSIS

Phosphorous	7%
Calcium	22%
Sulphur	8%

Trace amounts;

- trace elements,
- soil & biological stimuli
- biological carbon
- humic
- fish

Made of a combination of highly available Biologically Enhanced rockphosphate, water soluble super fines, gypsum and sustained release elemental sulphur, **superSEVEN** is the only product to have controlled nutrient release capabilities which enhances plant growth and development.

superSEVEN contains population of active carbon biology and minor trace elements. It utilises biological technology to increase nutrient availability and efficiency in the soil, reduces 'P' lock-up and creates a nutrient releasing environment in the soil.

“ Without the negative side effects of acid based superphosphate and more growth...superSEVEN; a super replacement for smart farmers ”

superSEVEN can be used alone as a super replacement or customised by blending trace elements as needed. superSEVEN spreads like lime
